

Java SE 8 Fundamentals Ed 1

Duración

Días: 5 Días

Horas: 30 horas

Descripción

This Java SE 8 Fundamentals training introduces you to object-oriented programming using the Java language. Through hands-on exercises, you'll begin to build a baseline of knowledge to propel your career in development.

Objetivos

1. Use classes from the `java.time` and `java.time.format` packages to format and print the local date and time
2. Access and create static fields and methods
3. Declare, override, and invoke methods
4. Use casting without losing precision or causing errors
5. Manipulate text data using the `String` and `StringBuilder` classes
6. Access the fields and methods of an object
7. Create Java classes and use object references
8. Manipulate primitive numeric data and string data using Java operators
9. Write Java code with variables, arrays, conditional and loop constructs
10. Encapsulate a class using access modifiers and overloaded constructors
11. Define and implement a simple class hierarchy
12. Demonstrate polymorphism by implementing a Java Interface
13. Use a Predicate Lambda expression as the argument to a method
14. Handle a checked exception in a Java application

Qué aprenderá

- ✓ Use Java programming language constructs to create a Java technology application.
- ✓ Use decision and looping constructs and methods to dictate program flow.
- ✓ Understand basic object oriented concepts such as inheritance, encapsulation, and abstraction.
- ✓ Use and manipulate object references, and to write simple error handling code.
- ✓ Use the new SE 8 `java.time` and `java.time.format` packages to format and print the local date and time.
- ✓ Specify a data modification by passing a predicate lambda expression to the Collections class.

A quién se dirige

- ✓ Administrator
- ✓ Developer
- ✓ Implementer
- ✓ Systems Administrator

Beneficios

By enrolling in this course, you'll expand your knowledge of Java SE 8, while building your Java skill set. You'll build a solid basis in the Java programming language upon which to base continued work and training.

Contenido

1. What Is a Java Program?
 - ✓ Introduction to Computer Programs
 - ✓ Key Features of the Java Language
 - ✓ The Java Technology and Development Environment
 - ✓ Running/testing a Java program

2. Creating a Java Main Class
 - ✓ Java Classes
 - ✓ The main Method

3. Data in the Cart
 - ✓ Introducing variables
 - ✓ Working with Strings
 - ✓ Working with numbers
 - ✓ Manipulating numeric data

4. Managing Multiple Items
 - ✓ Working with Conditions
 - ✓ Working with a List of Items
 - ✓ Processing a list of ítems

5. Describing Objects and Classes
 - ✓ Working with objects and classes
 - ✓ Defining fields and methods
 - ✓ Declaring, Instantiating, and Initializing Objects
 - ✓ Working with Object References
 - ✓ Doing more with Arrays
 - ✓ Introducing the NetBeans IDE
 - ✓ Introducing the Soccer League Use Case

6. Manipulating and Formatting the Data in Your Program

- ✓ Using the String Class
- ✓ Using the Java API Docs
- ✓ Using the StringBuilder Class
- ✓ More about primitive data types
- ✓ The remaining numeric operators
- ✓ Promoting and casting variables

7. Creating and Using Methods

- ✓ Using methods
- ✓ Method arguments and return values
- ✓ Static methods and variables
- ✓ How Arguments are Passed to a Method
- ✓ Overloading a method

8. Using Encapsulations

- ✓ Access Control
- ✓ Encapsulation
- ✓ Overloading constructors

9. More on Conditionals

- ✓ Relational and conditional operators
- ✓ More ways to use if/else constructs
- ✓ Using Switch Statements
- ✓ Using the NetBeans Debugger

10. More on Arrays and Loops

- ✓ Working with Dates
- ✓ Parsing the args Array
- ✓ Two-dimensional Arrays
- ✓ Alternate Looping Constructs
- ✓ Nesting Loops
- ✓ The ArrayList class

11. Using Inheritance

- ✓ Overview of inheritance
- ✓ Working with subclasses and superclasses
- ✓ Overriding methods in the superclass
- ✓ Introducing polymorphism
- ✓ Creating and extending abstract classes

12. Using Interfaces

- ✓ Polymorphism in the JDK foundation classes
- ✓ Using Interfaces
- ✓ Using the List Interface
- ✓ Introducing Lambda expressions

13. Handling Exceptions

- ✓ Handling Exceptions: An overview
- ✓ Propagation of exceptions
- ✓ Catching and throwing exceptions
- ✓ Handling multiple exceptions and errors
