

Designing and Implementing a Microsoft Azure AI Solution

AI-102 Designing and Implementing an Azure AI Solution is intended for software developers wanting to build AI infused applications that leverage Azure Cognitive Services, Azure Cognitive Search, and Microsoft Bot Framework. The course will use C# or Python as the programming language.

Duration: 4 days

Audience

Software engineers concerned with building, managing and deploying AI solutions that leverage Azure Cognitive Services, Azure Cognitive Search, and Microsoft Bot Framework. They are familiar with C# or Python and have knowledge on using REST-based APIs to build computer vision, language analysis, knowledge mining, intelligent search, and conversational AI solutions on Azure.

Prerequisites

Before attending this course, students must have:

- Knowledge of Microsoft Azure and ability to navigate the Azure portal
- Knowledge of either C# or Python
- Familiarity with JSON and REST programming semantics

To gain C# or Python skills, complete the free [Take your first steps with C#](#) or [Take your first steps with Python](#) learning path before attending the course.

If you are new to artificial intelligence, and want an overview of AI capabilities on Azure, consider completing the Azure AI Fundamentals certification before taking this one.

Objectives

- Describe considerations for AI-enabled application development
- Create, configure, deploy, and secure Azure Cognitive Services
- Develop applications that analyze text
- Develop speech-enabled applications
- Create applications with natural language understanding capabilities
- Create QnA applications
- Create conversational solutions with bots
- Use computer vision services to analyze images and videos
- Create custom computer vision models
- Develop applications that detect, analyze, and recognize faces
- Develop applications that read and process text in images and documents
- Create intelligent search solutions for knowledge mining

Topics

Module 1: Introduction to AI on Azure

- Introduction to Artificial Intelligence
- Artificial Intelligence in Azure

Module 2: Developing AI Apps with Cognitive Services

- Getting Started with Cognitive Services
- Using Cognitive Services for Enterprise Applications

Module 3: Getting Started with Natural Language Processing

- Analyzing Text
- Translating Text

Module 4: Building Speech-Enabled Applications

- Speech Recognition and Synthesis
- Speech Translation

Module 5: Creating Language Understanding Solutions

- Creating a Language Understanding App
- Publishing and Using a Language Understanding App
- Using Language Understanding with Speech

Module 6: Building a QnA Solution

- Creating a QnA Knowledge Base
- Publishing and Using a QnA Knowledge Base

Module 7: Conversational AI and the Azure Bot Service

- Bot Basics
- Implementing a Conversational Bot

Module 8: Getting Started with Computer Vision

- Analyzing Images
- Analyzing Videos

Module 9: Developing Custom Vision Solutions

- Image Classification
- Object Detection

Module 10: Detecting, Analyzing, and Recognizing Faces

- Detecting Faces with the Computer Vision Service
- Using the Face Service

Module 11: Reading Text in Images and Documents

- Reading text with the Computer Vision Service
- Extracting Information from Forms with the Form Recognizer service

Module 12: Creating a Knowledge Mining Solution

- Implementing an Intelligent Search Solution
- Developing Custom Skills for an Enrichment Pipeline
- Creating a Knowledge Store
